---

### A) Plugin Structure - [top](#)

This plugin is visually divided into 3 parts: **Header, Interface and Playlist**. See the picture below. This allows easy control, for example, to hide a part (ex: Header) if you do not want to show on your site. This can be done because each part has a css class that identifies it and can be manipulated by css properties. See examples below to hide any of these parts.

**Hide the Header part.** Note that 123 is the identification in the shortcode for each player that was created. You need to replace the number 123 with the actual number.

```
#disk-player-container_123 div.jp-jplayer {
    display: none;
}
```

**Hide the Interface part.** In the same way you need to replace the number 123 with the actual number.

```
#disk-player-container_123 div.jp-interface {
    display: none;
}
```

**Hide the Playlist part.** In the same way you need to replace the number 123 with the actual number.

```
#disk-player-container_123 div.jp-playlist {
    display: none;
}
```

## B) Install - [top](#)

The plugin can be installed via FTP or within the administration of Wordpress via Upload. The second form is the most recommended.

1 - **FTP Option**) Unzip the main.zip file you have downloaded. Copy the folder called "disk-player" into the Wordpress folder called /wp-content/plugins/  
 2 - Inside the Wordpress administration click on Plugins > Installed Plugins. You see that the plugin has been installed. Just click on Activate. A new menu appears on the side called Disk Player.

1 - **Upload Option**) Unzip the zip file you have downloaded. You will see another zip file called **disk-player-install-v1.0.zip** or similar.

2 - Inside the Wordpress administration click on Plugins > Add New > Upload. Click on Choose File, select the file **disk-player-install-v1.0.zip** and then click on Install Now. Now select Plugins > Installed Plugins, find the Disk Player plugin installed and click on Activate. A new menu option appears on the side called Disk Player.

## C) How to Use - [top](#)

Use this plugin is super simple and fast. All configuration is concentrated on one page. Please follow these steps below.

1. On the menu that was created (Disk Player) after installing the plugin, select **Add New**. Give it a name and save... This will create a new Player. There is no limit, you can create as many you want.
2. You will see below a option panel called "Add Tracks". Add as many tracks sound you want and configure your options.
3. On the right side you will see the general settings ( Disk Player Settings ) for this player. Options such as adding a picture, show numbers, and a lot of color options for specific elements in player. *On new updates should be added new configuration options.*
4. After adding Tracks and set the options you want, now it's time to add the player to be shown on your site. Click the Disk Player menu option and you will see listed the new player. See the picture below.
5. Then you copy and paste the shortcode to a page, post or Text widget. You can also add the shortcode directly into a php page of your theme.  
Example:

```
<?php echo do_shortcode('[disk_player id="1061"]'); ?>
```

6. See in the picture below the **Duplicate functionality**. Important to reuse the settings already defined in a player.

## D) Import Color Scheme - [top](#)

Color Scheme are files of type .XML with color settings already defined. You can import these files using the import tool of Wordpress. Each imported file will create a new registration of player (will be listed as a new player). Then you can use the color settings and add music and other settings for it.

Follow the steps below to import:

1. On Wordpress menu select: Tools > Import > Import WordPress
2. Select Choose File and select a xml file. The xml files are in **\_color\_schemes** folder. This folder is part of the files that you downloaded
3. Follow the steps to import. As a result, a new file will be created in the list of players.

## E) Sources and Credits - [top](#)

I've used the following librarys, scripts, icons or other files as listed.

- JPlayer HTML5 Media Library from Happyworm
- Custom-Metaboxes-and-Fields-for-WordPress from WebDevStudios
- Tiny Scrollbar from Wieringen
- Icon Fonts (IcoMoon) from Keyamoon

Once again, thank you so much for purchasing this plugin. As I said at the beginning, I'd be glad to help you if you have any questions relating to this plugin. No guarantees, but I'll do my best to assist. If you have a more general question relating to the plugins on CodeCanyon, you might consider visiting the forums and asking your question in the "Item Discussion" section.
